FORAGE

The field: who else is here, and what we can stand on.

At least five live products let an agent find a tool and pay per call in USDC. None pays the app that brought the buyer or shares a token with buyers and suppliers. The token markets sell inference (Antseed), run on their own chain (Kite) or reward staked activity, not paid calls (Olas). Almost everything else we need is open source.

7 October 2026 · Atharva Amritkar. About 200 names screened across payment rails, tool catalogs, tool companies, token markets and standards; the closest were read in their own docs and repositories the same day. The full list is in the data folder.

Who does what

the left half is crowded and becoming a standard; the right half is where Forage stands alone

	WHAT A MARKET NEEDS				WHAT BRINGS DEMAND BACK					
Who	Agent search	Per-call USDC	Self listing	Batched sub-cent	Pays the app	Usage token	Stake on supplier	Holder discount	Fee to the supplier	What it is, and its signal
CRYPTO-NATIVE TOOL CATALOGS										
Coinbase Bazaar, Agentic.Market	●	●	●	◐	○	○	○	○	free, then $0.001 a settlement	x402 catalog; 23,000+ resources
AgentCash	●	●	●	◐	○	○	○	○	not published	one balance, x402 and MPP; 1.4M+ paid calls
Circle Agent Marketplace	●	●	◐	●	○	○	○	○	not published	curated x402 catalog; 600+ services
mpp.dev (Stripe, Tempo)	●	●	◐	●	○	○	○	○	none published	128 MPP services; OpenAI, Anthropic listed
Orthogonal	●	●	○	◐	○	○	○	○	not stated	search and scraping; $4.3M led by Pantera
BlockRun	●	●	○	○	○	○	○	○	no supply side	first-party reseller; 28.9M transactions
SUPPLIER RAILS WITH THEIR OWN DISTRIBUTION										
Cloudflare Monetization Gateway	○	●	◐	○	○	○	○	○	not published	prices any API or MCP tool at the edge
TOKEN MARKETS										
Antseed (ANTS)	●	●	●	●	○	●	●	○	4% protocol fee	inference on Base; about $309K settled
Kite AI (KITE)	●	●	●	○	○	◐	◐	○	commission, paid into KITE	payments chain with a service catalog
Olas Mech Marketplace (OLAS)	●	◐	●	○	○	◐	○	○	set by its DAO	agents sell tool calls; $110K turnover
Virtuals ACP (VIRTUAL)	●	◐	●	○	○	○	○	○	not verified	escrowed jobs, not per-call APIs
WEB2 CATALOGS										
OpenRouter	●	◐	○	○	○	○	○	○	5.5% on buyer top-ups	one balance for 500+ models; no tools
Apify Store	●	●	●	◐	◐	○	○	○	20% plus platform costs	20,000+ Actors payable in USDC
RapidAPI	◐	○	●	○	○	○	○	○	25%, paid monthly	API hub for human developers
Composio	●	○	○	○	○	○	○	○	no supplier payouts	tool calling for 1,500+ SaaS toolkits
FORAGE	●	●	●	●	●	●	●	●	**small, capped in the contract**	**first-party tools; apps and both sides earn**

● yes ◐ partly, curated, or by another route ○ no, or none found in the docs read. Batched settlement is now part of the x402 standard, so it is table stakes rather than an edge. Apify pays affiliates for referred customers, not per call.

What we can stand on from day one

open source and public feeds first, so the catalog is not empty at launch

1 Build on

open code and standards

- **x402 SDKs and batch-settlement scheme** Apache-2.0
- **Our own facilitator: x402-rs, Daydreams** Apache-2.0, MIT
- **ERC-8004 identity and reputation** live on Base
- **EAS attestations** MIT, on Base
- **ERC-8021 builder codes** attribution on Base
- **mppx, to accept MPP too** MIT
- **World AgentKit, dstack badges** MIT, Apache-2.0

Settlement, identity and attribution already exist as open code.

2 Import the catalog

public feeds, no key

- **Coinbase Bazaar API** 23,000+ resources
- **Circle marketplace API** 600+ services
- **mpp.dev feed and MCP** 128 services
- **Official MCP registry** open API
- **x402scan discovery docs** Apache-2.0
- **Agentic.Market storefront** Coinbase
- **Glama, Smithery directories** MCP servers

Index what exists; rank by what settles through us.

3 List first

first-party, keyless, USDC on Base today

- **Exa** search, $0.007 a call
- **Tavily** search, $0.01 a call
- **Browserbase, Browser Use** browsers
- **Apify** 20,000+ Actors
- **Linkup** search and fetch
- **CoinGecko, Nansen** market data
- **On MPP: Parallel, Dune, Alchemy**

They do nothing to be listed; we route and pay them directly.

4 Host ourselves

open-source tools, permissive licences

- **Crawl4AI, scraping** Apache-2.0
- **faster-whisper, speech to text** MIT
- **Kokoro, text to speech** Apache-2.0
- **FLUX.1 schnell, images** Apache-2.0
- **Docling, MarkItDown, documents** MIT
- **Playwright MCP, browser** Apache-2.0
- **Qdrant, vector search** Apache-2.0

Fills speech, documents and images, which no keyless supplier covers yet.

5 Be listed in

free distribution

- **Claude Code, Cursor, Codex** direct MCP install
- **MCP registry, Smithery, Glama** publish the server
- **Bazaar, Agentic.Market** on a settled call
- **Circle marketplace** form and review
- **mpp.dev** pull request
- **x402scan** register the resource
- **Docker MCP Catalog** pull request

Likely closed: the Claude and ChatGPT directories, whose rules exclude apps that move money or sell credits.

Licence traps. SearXNG and Firecrawl are AGPL-3.0, so hosting them means publishing our changes. FLUX.1 dev weights are non-commercial; only schnell is open. Crawl4AI asks for visible attribution. Brave Search's terms forbid resale, so a search tool comes from suppliers that allow it. Antseed's code is GPL-3.0, so our contracts are written fresh on the x402 scheme, not forked from it.

Token designs side by side

what each token is actually for

		Fixed scheduled mint	Split by paid usage	Buyers earn	Suppliers earn	Routing apps earn	Stake on a chosen supplier	Stake mints credits	Holder discount, all tools	Fees buy the token
ANTS	Antseed	●	●	●	●	○	●	○	○	○
VVV, DIEM	Venice	◐	○	○	○	○	○	●	○	●
KITE	Kite AI	◐	○	○	◐	○	◐	○	○	●
OLAS	Olas	●	◐	◐	◐	○	○	○	○	●
TAO	Bittensor	●	○	○	●	○	◐	○	○	○
MOR	Morpheus	●	○	○	●	◐	○	◐	○	○
$FORAGE	design	●	●	●	●	●	●	●	●	●

Closest by far is Antseed. Untested anywhere we read, and so both the opening and the open question: routing apps earning from the mint, a holder discount that many independent suppliers honour, a mint that halves with usage, and buybacks that shrink it.

What we do with this

- **Stand on the standard.** Settlement is no longer a moat: x402 ships batched settlement, and Coinbase, Circle and Stripe each run a catalog of paid services. Our code is the catalog, the attribution and $FORAGE.
- **Route first, install later.** On day one our MCP server pays keyless suppliers at their own endpoints. Those payments are on-chain, so they count as verified usage before a supplier installs anything.
- **Seed the gaps ourselves** with permissive open-source tools, as the first supplier in each empty category.
- **Be listed in every catalog.** Each one is free distribution, and none of them pays the app that sends it buyers.
- **Lead with what nobody ships:** a fee for the routing app, and a token that buyers and suppliers both earn and stake.
- **Keep watching** AgentCash and Orthogonal (the same buyer product), Kite (a token with a catalog) and Cloudflare (suppliers at the edge).

Sources, read 7 October 2026: x402 spec; Coinbase CDP docs; agentic.market; agentcash.dev; Circle Agent Stack docs; mpp.dev; orthogonal.com; blockrun.ai; Cloudflare blog, 1 July 2026; Antseed repository and antscan.co; token docs of Kite, Olas, Venice, Bittensor and Morpheus; pricing pages of OpenRouter, Apify, RapidAPI and Composio; x402 pages of Exa, Tavily, Browserbase, Browser Use, Apify, Linkup, CoinGecko and Nansen; ERC-8004 contracts; Base builder codes docs; each repository's licence file; Anthropic's directory policy; OpenAI's app guidelines. Grok widened the list of names; none of its figures is used. Fees and counts are the companies' own statements; Forage's row is its design. **Analysis, not financial advice.**
